

At challenging times when educational institutions need to initiate their security drill and procedure, it is important the teaching staff can be confident the emergency messaging system is reliable, robust and operates from all areas within the campus—**without fail**. This is where Salcom can help. Salcom solutions have been used for many years by emergency & first response organisations throughout New Zealand and beyond, including Fire & Emergency NZ (FENZ), the Order of St. John (NZ), NZ Police and by many government departments, including the Ministry of Civil Defence & Emergency Management (MCDEM). Salcom systems are known for their reliability and fitness for purpose.

School Alert Paging System

Transmitters

Alerts can be sent to traditional Alpha / Numeric pagers, or to the new range of discrete, touch screen, USB chargeable watch pagers.

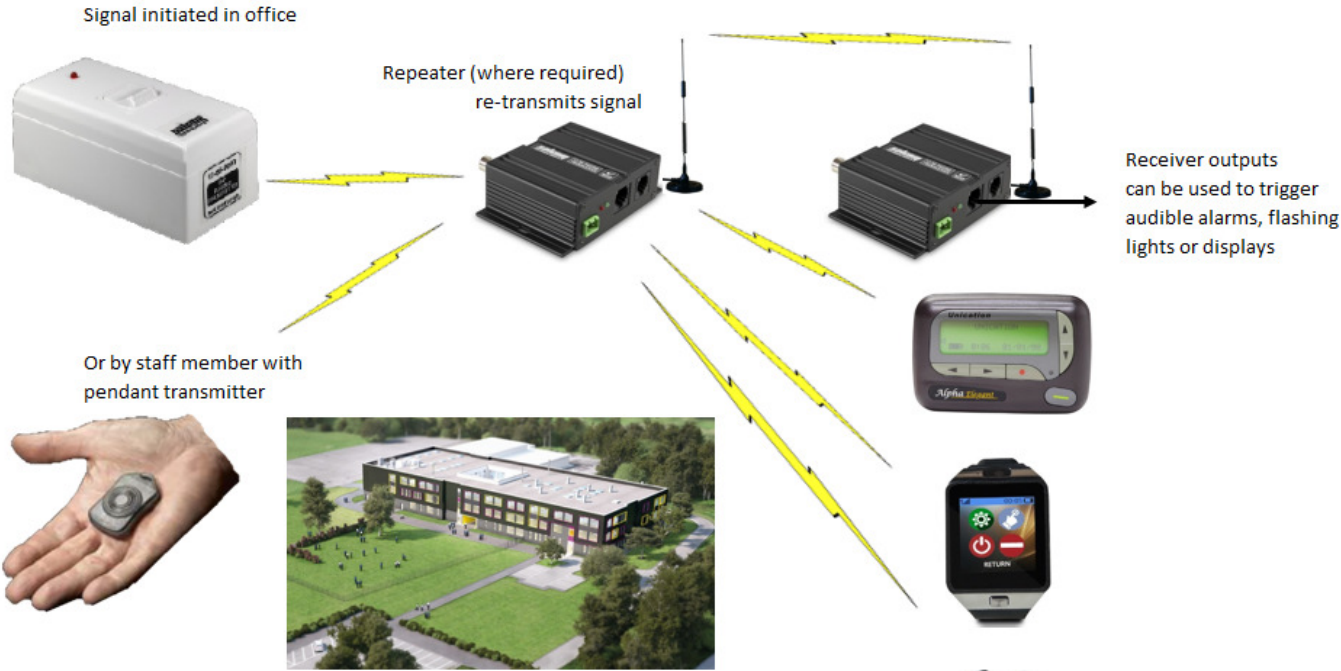

- Alarms can be initiated by any Salcom transmitter, from outside in the school grounds or from the office or class;
- Transmitters can be hand-held, lanyard-worn, wrist-strapped or desk or wall mounted, as preferred;
- Discrete touch-screen (USB chargeable) watch pagers can be incorporated into the system;
- The 12-90 transceiver can be configured as a repeater to provide greater range around the campus. Any number of these can be used, to suit the size and layout of the facility.
- A 12-84-7000 Relay Output Receiver provides four outputs which can be controlled remotely via SALCOM transmitters to trigger one, or several alarms.
